

SNP-03

Class 08 - Science

1. Define lightning conductor. [1]
2. What do you mean by earthing? [1]
3. Write the cause of earthquake. [1]
4. During thunderstorms when you are in open where should you take shelter? [1]
5. Write the importance of earthing. [1]
6. When and where a major tsunami takes place in India? [1]
7. Is it true that earth is balanced on the horn of a bull, when bull shifts its horn an earthquake takes place? [1]
8. Name the device used to save multistoreyed building from lightning. [1]
9. What are the safe places during thunderstorm? [1]
10. Where is the lightning rod attached to protect the building from lightning? [1]
11. Write the causes of tremors on earth. [1]
12. Is sitting on motor cycle safe or not during lightning? [1]
13. Name some natural phenomenon which can be predicted to some extent. [1]
14. What are seismic waves? [1]
15. What is an electric discharge? [1]
16. What is an earthquake? [1]
17. What are seismic or fault zones? [1]
18. List three states in India where earthquakes are more likely to strike. [1]
19. What happens when amber is rubbed of fur? [1]
20. What are other natural phenomenon caused by earthquake? [1]
21. What are the harmful effects of lightning on a lightning victim? [1]
22. Who established the relation between sparks produced by amber and the thunderstorms? [1]
23. Name the instrument used to measure earthquake. [1]
24. What is tsunami? [1]
25. Name a natural phenomenon which cannot be predicted yet now. [1]
26. The strips of an electroscope diverge when a charged body is brought in contact with the metal clip. Now the clip is touched gently by our hand. What will happen to the strips? Explain. [2]
27. During the construction of a building the lightning conductor was left hanging in the air by mistake. Would the lightning conductor be still effective? Explain. [2]
28. Explain why it is safer to use a wireless telephone instead of a landline telephone during lightning. [2]
29. If a charged plastic straw is brought near another uncharged plastic straw, what will happen? [2]
30. If the metal clip used in the electroscope is replaced by an ebonite rod and a charged body is brought in contact with it, will there be any effect on the aluminium strips? Explain. [2]

31. How can charging take place when the substances are rubbed? [2]
32. What is electric discharge? How does it occur? [2]
33. Explain how does lightning conductors protect a building from getting struck by lightning. [2]
34. Name the regions of the earth more prone to earthquakes. [2]
35. How many different types of charges are there? Write the nature of charges on glass rod and silk cloth when they are rubbed each other? [2]
36. What is an earthquake? How does it occur? [2]
37. What safety measures will you take to protect yourself from any spark when you are inside your home? [2]
38. You might have observed on a dry day that when you touch the screen of a television or computer monitor (with picture tube), you get a slight shock. Why does it happen? [2]
39. In an electroscope, if a negatively charged body is brought in contact with the metal clip, the strips of the electroscope diverge. If now another charged object carrying an equal amount of positive charge is brought in contact with the clip, what will happen? [2]
40. What are the causes of sparking? [2]
41. What is lightning conductor? How does it protect building from lightning? [2]
42. Name some consequences of earthquake which are not destructive. [2]
43. What is charging by friction? Give an example of charging by friction. [2]
44. What steps should be taken if someone becomes a victim of lightning? [2]
45. Plastic straws A and B are rubbed with a dry cotton cloth. What will happen if they are brought near each other? [2]
46. What are fault zones? Name the fault zones in India. [2]
47. Why we sometimes hear a crackling sound, when we take off woollen or synthetic clothes? [2]
48. How the power of an earthquake is estimated? At what strength it becomes destructive? [2]
49. How does electric discharge occur in clouds? [2]
50. If air and cloud were good conductors of electricity, do you think lightning could occur? Explain. [2]
51. The aluminum strips in an electroscope as shown in the figure are replaced by plastic strips and a charged body is brought in contact with the metal clip. What will happen? [2]

52. What is static electricity? How is it different from electric current? [2]
53. Explain the safety measures during thunderstorm when you are inside your home. [2]
54. Why lightning strikes more frequently in the hilly areas? [2]
55. Is it possible to predict the occurrence of an earthquake? [2]
56. Write about two last major earthquakes in India. [2]
57. What suggestions will you give the people to make 'Quake Safe'? [3]
58. What is the reason behind the lightning that we see in the sky during rainy season? [3]

59. What are seismic zones? Where the main seismic zones are located in our country? [3]
60. Draw a well labelled diagram of structure of the earth. [3]
61. Explain the construction and working of electroscope. [3]
62. Name the scale on which the destructive energy of an earthquake is measured. An earthquake measures 3 on this scale. Would it be recorded by a seismograph? Is it likely to cause much damage? [3]
63. During lightning what should we do? [3]
64. What is a seismograph? How does it work? [3]
65. Explain the structure of seismograph. [3]
66. Why does lightning usually strike tall buildings? [3]
67. Describe with the help of a diagram an instrument which can be used to detect a charged body. [3]
68. How can you save yourself from lightning? [3]
69. What precautions would you take if lightning occurs while you are outside the house? [3]
70. If the materials used for constructing a building were good conductors, do you think lightning will strike the building? Will the lightning conductor be still required to be installed in the building? [3]
71. Explain the mechanism of thunderstorms. [3]
72. What is a lightning rod? How it protects the buildings? [3]
73. How will you charge a plastic pen by the method of friction? [3]
74. In the event that an earthquake does strike what steps will you take to protect yourself? [3]
75. What is seismograph? Explain its construction and functioning. [3]
